SystemReady for Client PC

Linaro

Current Scope of Work

- Use Raspberry Pi 4 as one of the reference platform
  - Setup Raspberry Pi4 for SystemReady tests (start with ES and extend to SR)
  - Run test suites to get report on the status of components/modules passing/failing compliance tests
  - Based on the report,create sub-tasks for each of the failing components under UEFI/ACPI,SMBIOS or OS specific development
- Leverage SBSA qemu reference model's current functionality for relevant platform components
- Also,plan is to use Arm Morello boards

Linaro

Thank you
